1872, GRANT—Had 3,597,070 to 2,834,079 for Greeley, 29,403 for O'Connor, and 5,608 for Black. Grant's majority, 729,975.

1876, HAYES—Had 4,033,950 to 4,284,885 for Tilden, 81,740 for Cooper, 9,522 for Smith, and 2,636 scattering. Tilden's majority over Hayes, 250,935, Tilden's majority of the entire vote cast, 157,037. Hayes less than the combined vote of others, 344,833.

1880, GARFIELD—Had 4,449,053 to 4,442,035 for Hancock, 307,306 for Weaver, and 12,576 scattering. Garfield over Hancock, 7,018. Garfield less than the combined vote for others, 313,864.

1884, CLEVELAND—Had 4,911,017 to 4,848,334 for Blaine, 151,809 for St. John, 133,825 for Butler. Cleveland over Blaine, 62,743. Cleveland less than entire vote of opponents, 222,951.

1888, HARRISON—Had 5,440,216 to 5,538,233 for Cleveland, 249,937 for Fisk (Prohibition), 141,105 for Streeter (Union Labor), 2,808 for Cowdrey (United Labor). Cleveland over Harrison, 98,017. Harrison less than the entire vote of opponents, 491,997.

1892, CLEVELAND—Had 5,556,918 to 5,176,108 for Harrison, 1,041,028 for Weaver (Populist), 264,133 for Bidwell (Prohibition), and 21,164 for Wing (Socialist). Cleveland over Harrison, 380,810. Cleveland less than the entire vote of opponents, 945,515.

1896, McKINLEY—Had 7,104,779 to 6,502,925 for Bryan, 133,148 for Palmer (Gold Dem.), 132,107 for Levering (Prohibition), 36,274 for Matchett (Soc. Labor), 13,967 for Bentley (National). McKinley over Bryan, 591,854. McKinley over all opponents, 286,356.

1900, McKINLEY—Had 7,217,810 to 6,357,826 for Bryan, 208,791 for Woolley (Prohibition), 50,218 for Barker (Populist), 87,769 for Debs (Soc. Dem.), 39,944 for Malloney (Soc. Labor), 518 for Leonard (United Christian), 5,098 for Ellis (Union R.). McKinley over Bryan, 859,984. McKinley over all opponents, 458,146.

1904, ROOSEVELT—Had 7,624,489 to 5,082,754 for Parker, 402,286 for Debs (Soc. Dem.), 258,787 for Swallow (Prohibitionist), 32,088 for Corrigan (Soc. Labor), 117,935 for Watson (Populist). Roosevelt over Parker, 2,641,735. Roosevelt over all opponents, 1,730,639.

SCRIPTURAL AND CLASSICAL PROPER NAMES.

ON THE PRONUNCIATION OF SCRIPTURE AND CLASSICAL PROPER NAMES, WITH SOME GENERAL DIRECTIONS FOR THE PRONUNCIATION OF GREEK AND LATIN.

The plan adopted in printing these lists has been (1) to divide the proper names into syllables by the usual hyphen sign (-); and (2) to mark the accent ('). The only diacritical mark employed in the list of proper names is the macrotone (ˉ). In the list of quotations the Greek is printed in its equivalent English transliteration, as in the body of the work. In the Latin quotations vowels long by nature are so marked (ē), except in the cases where their position would show them to be long; and contractions are indicated by a circumflex accent (ˆ), as *virām*, for *virorum*.

I. SCRIPTURE NAMES.

The names in this list are chiefly from the Hebrew, some from the Greek, and a few from the Latin. The pronunciation of Hebrew is a question of great uncertainty, and even among the Jews who use dialectal forms of it two schools of pronunciation exist—the German and the Spanish. In England and America the ordinary value is given to the letters, except to *g*, which is hard, as in Gilead, Gilgal, Bethphage being the sole instance in which it has the sound of English *j*; so that if the long vowel mark (if any) and the position of the accent be duly noted there can be no difficulty as to the pronunciation of any of these words. Thus, in *Ā'-bel Mā'-im*, the hyphen shows the division into syllables, the macrotone (ˉ) marks the long vowels, and the omission of any diacritical mark over *e* and *i* shows that these letters have their ordinary English value.

II. GREEK.

It is well-nigh impossible for us in the nineteenth century to determine with any certainty the original pronunciation of Greek words and names. We have neither trustworthy record nor unbroken tradition to help us. The study of Greek fell into disrepute with the decline of the Roman Empire, and, indeed, was not revived in Europe until the fifteenth century. At that time a perfectly arbitrary value was assigned to each letter in the Greek alphabet. At the beginning of the sixteenth century Greek pronunciation had assumed a curious phase. Only two sounds were given to all the Greek vowels and diphthongs, whether long or short; *u* was pronounced as *v* and *k* as *ch*, so that *kentaurois* was pronounced *chentafris*. About 1540 a reaction took place against this method, and after a struggle the principle of pronouncing Greek as though it were English was accepted. For us the question of Greek pronunciation is further complicated by the fact that the Greek alphabet differs entirely from the Roman, which has generally been adopted in the modern languages of Europe. A Greek word therefore before it becomes Anglicized must be transliterated; that is to say, the symbols used in Greek to represent certain sounds must be replaced by those symbols which seem to us to represent similar sounds in English. This transliteration is a matter of great difficulty, and it can scarcely be said that it has been carried out in English with care or consistency. Had we been left to follow our own judgement, no doubt we should have been more successful, but, as our first acquaintance with the history and literature of Greece came from Latin authors, we accepted the method of transliterating Greek words which they adopted. This drove us into many obvious and indisputable errors, of which a typical example may be quoted here. The guttural *k* is always hard in Greek, but in pronouncing the name *Alcibiades* it is customary to sound the *c* soft in accordance with the English usage. Now, had we transliterated the name direct from Greek, there is little doubt, as there is no *c* in Greek, that we should have spelled it *Alkibiades*, and pronounced the *k* hard; but we got the name *Alcibiades* from the Latin, in which language the Greek *k* was always transliterated to *c*, and then gave the Latin *c* the soft sound of the English *c*. This is only a typical instance of the way in which Greek names have been dealt with in English. A cursory glance at the pages of Grote's *History of Greece* shows us that the result of transliterating Greek words directly into English, instead of through the medium of Latin, is to make them unintelligible to the English reader.

The rule almost universally adopted in pronouncing Greek names in English is to give each letter the sound it has in English, taking care to pronounce all final as well as medial vowels—e. g., *Mer'-o-pe* is a trisyllable, not a dissyllable as it would be in English. It must also be remembered that vowels naturally long in Greek are pronounced long in English, while those that are naturally short are pronounced short. Thus *An-tig'-ō-nē* must never be pronounced *An-ti-gō-nē*.

The Greek diphthongs are pronounced precisely like similar combinations in English. The only one which presents any difficulty is *ui*, and this is pronounced as *whi* in *whine*.

The Greek simple consonants are all of them pronounced as the corresponding consonants in English, while the compound consonants *ph*, *th*, *ch*, and *ps* are pronounced as *ph*, *th*, *ch*, and *ps* respectively. *Z* is pronounced as *dz* and *g* is always hard except before *g*, *k*, *x*, and *ch*, when it is sounded as *n*.

The pronunciation of Greek as set forth above, although it is universally adopted in England, is absolutely indefensible from the point of view of accuracy. It has, however, received the sanction of many generations, and is not likely to be readily set aside.

It is a matter of the utmost difficulty to arrive at anything like a certain view of the pronunciation adopted by the ancient Greeks themselves. The following general statements are all that can be ventured upon. The vowels had the same value as the vowels in Latin and modern Italian, except that *u*, whether long or short, was pronounced like the French *u* or the German *u*. The consonants in Greek were similar to the consonants in English, except that *g*, unlike our *g*, was always hard, and that in Greek there was nothing to correspond to the English soft *c*, which has proved such a stumbling-block in the way of the pronunciation of Greek and Latin. The double consonants, *ph*, *th*, and *ch*, were, no doubt, pronounced as two distinct consonants; thus, *p-h*, *t-h*, and *k-h*. Of the diphthongs little can be said with any confidence. In modern Greek they have all approximated to one uniform sound, but this was emphatically not the case in ancient Greek. In all probability each vowel in the diphthong was pronounced separately and distinctly.

III. LATIN.

The pronunciation of Latin rests upon surer ground. In the first place, there is not the difficulty of transliteration to contend with; in the second, the modern languages derived from Latin afford us more evidence as to the ancient language than is the case with Greek. At the outset it must be explained that the custom in English has been to disregard the obvious facts of the case, and pronounce Latin as though it were English. There is, however, in the present day a consensus of opinion against this practice, and the conclusions to which modern scholars have come as to the pronunciation of Latin are briefly stated here.

VOWELS.

ā, as *a* in *father*; never as in *fate*.
ă, as the same sound shortened; never as in *fat*.
ē, as *ā* in English *stāte*.
ĕ, as *e* in *mēt*.
ī, as *i* in *machīne*.
î, as *i* in *pīn*.
ō, between *aw* in *brāw* and *o* in *hōme*.
ŏ, as *o* in *nōt*.
ū, as *oo* in *foōl*; never as *u* in *cūbe*.
û, as *u* in *full*; never as *u* in *būt*.
y, as German *ü*. It only occurs in Greek words transliterated into Latin.
The rule for the pronunciation of diphthongs is to pronounce the constituent vowels with as much rapidity as possible, so that they are run together.
ae, as the *ā* in German.
au, as *au* in German *haus*; i. e., as the *ou* in English *house*, only broader.
ei, as *ei* in English *skēin*, *rēin*.
eu, as *eu* in Modern Italian.
ui, a rare combination in Latin, as in French *oui*.

CONSONANTS.

c, always hard in Latin, never soft, as it so often is in English; e. g. Cicero should be pronounced *Kikero*.
g, always hard, as in *gate*; never soft, as in *gentle*.
n, before *c* and *g*, as *ng*; e. g., *incedit* is pronounced *ingkedit*.
ng, as in *an-ger*, not as in *hang-er*.
j, as *y* in *year*.
v, as *w* in *wine*.
r must always be trilled, whether in the middle or at the end of a word.
e. g., per must be pronounced as the *perr* in *per-ry*.
s, always sharp, as in *hiss*; never as in *his*; e. g., *dens* is pronounced *dense*.
bs, as *ps*.
ti before a vowel has its proper sound, and is never pronounced *sh*, as in English.
ph, *ch*, *th*, were not pronounced as one sound, as in English, but as *p-h*, *k-h*, and *t-h*.

In the table given, those consonants only are set down the pronunciation of which differs from that to which English people are accustomed. The consonants omitted in the list are pronounced in Latin precisely as in English.

QUANTITY.

Every vowel in Latin is either long or short, according as the voice dwells upon it or not. In pronouncing Latin a distinction must always be made between long and short vowels. For instance, we should say ā-mo, not ă-mo.

The quantity of a vowel in Latin is influenced by two considerations: 1. By position; 2. By the natural length of the vowel.

1. *Position*.—(1) A vowel followed by another vowel, or by *h* and a vowel is short; e. g., mēus, mīhi, præustus. (2) A vowel followed by two consonants, or by *x* or *z*, is long; e. g., amānt, strīx. To this rule there is the following exception: If a short vowel is followed by two consonants, the first of which is a mute, or *f*, and the second a liquid, the vowel may be treated as either short or long; e. g., tenēbrae, volūcris, volūcris, &c. In English it has long been the custom to pronounce a vowel followed by two consonants as though it were short. Thus, it is usual to say amāns, infēnsus, &c. This, however, is incorrect. As far as verse-making is concerned, every vowel followed by two consonants in Latin is treated as long, but in pronunciation some vowels followed by two consonants are pronounced long, some short. Thus we say ēs-tis, but rēc-tus. The following brief rules will prove a rough guide in this matter. A vowel was always pronounced long before the combinations *ns*, *nf*, *gn*; e. g., amāns, infēnsus, signum; also before *x*, *ct*, *ps*, and *pt*, when these combinations come from *gs*, *gt*, *bs*, *bt*, respectively; e. g., rēxi, rēctus, scripsi, scriptum.

2. *Natural length of the vowel*.—The following rules determine the natural length of a vowel, unaffected by position:

(1) Vowels not in the final syllable. No rule can be laid down for the natural quantity of root vowels, each root must be studied separately; but there are certain cases in which vowels are known to be long: (a) All diphthongs are long; e. g., pāucāe, cōepi, except before another vowel, the diphthong sometimes becomes short by position. (See 1 (1).) (b) All vowels, which have resulted from the contraction of two separate syllables are long; e. g., cōgo (for cōāgo). (2) For the quantity of vowels in the final syllable, there are certain general rules, but these admit of many exceptions, which cannot be systematically arranged without discussing the subject of Latin inflexions. Generally speaking (a) Monosyllables are long, e. g., pēs, mōs; (b) when the word ends with a vowel, *a* (except as an ending of the ablative case) and *e* final are short, musā, Carthaginē; *i*, *o*, *u* final are long, dominī, amō, genū; (c) when the word ends with a single consonant the final syllable is short, e. g., amāt, urbīs; except that *a*, *o*, *e* before *s* are long, e. g., amās, deōs, urbēs. To all these rules there are many exceptions, which, however scarcely affect the pronunciation of proper names.

ELISION.

Where a word ending in a vowel or a vowel followed by *m* preceded a word beginning with a vowel or *h*, the final vowel or vowel with *m* was disregarded for the purposes of scansion. This final syllable was not, however, altogether lost in pronunciation, but sounded lightly, the voice hardly dwelling on it at all.

The accent in Latin differed entirely from the accent in English, which may be defined as an emphasis laid on a certain syllable, while the Latin accent was more a matter of pitch than of stress. Space does not allow the question of accent to be discussed here. It need only be said that in Latin every monosyllabic word has the accent, that dissyllables have the accent on the penultimate, and that words of more syllables than two have the accent on the antepenultimate if the penultimate is short, and on the penultimate if it is long.

WEIGHTS AND MEASURES.

THE METRIC SYSTEM.

ITS RELATIONS TO THE STANDARDS USED IN THIS COUNTRY.

The basis of the metric system is the metre, the unit of length, which was calculated to (and does approximately) equal $\frac{1}{10000000}$ part of the distance measured along the line of a meridian from the equator to the pole=39.37 inches.

The SQUARE METRE is the unit of square measure of small surfaces.

The ARE, the unit of square measurement of larger surfaces, as of land, is a square the sides of which=10 metres.

The CUBIC METRE, or STERE, is the unit of volume. Its edges=1 metre in length.

The LITRE, the unit of capacity=a cube whose edges= $\frac{1}{10}$ of a metre.

The GRAMME, the unit of weight=the weight of a cube of distilled water the edges of which= $\frac{1}{100}$ of a metre.

LINEAR MEASURE.

- 1 Millimetre=.001 metre or .03 inch.
- 1 Centimetre=.01 metre or .39 inch.
- 1 Decimetre=.1 metre or 3.93 inches.
- 1 Metre=3.28 feet.
- 1 Decametre=10 metres or 32.80 feet.
- 1 Hectometre=100 metres or 328.08 feet.
- 1 Kilometre=1,000 metres or 1,093.63 yards.
- 1 Myriametre=10,000 metres or 6.21 miles.

SUPERFICIAL MEASURE.

- 1 Centiare=1 sq. metre or 1.19 sq. yards.
- 1 Are=100 sq. metres or .09 rood.
- 1 Hectare=1,000 sq. metres or 2.47 acres.

LIQUID MEASURE.

- 1 Centilitre=.01 litre or .01 pint.
- 1 Decilitre=.1 litre or .17 pint.
- 1 Litre=1.76 pints.
- 1 Decalitre=10 litres or 2.2 gals.
- 1 Hectolitre=100 litres or 22 gals.
- 1 Kilolitre=1,000 litres or 220 gals.

SOLID MEASURE.

- 1 Decistere=.1 stere or 3 cubic feet.
- 1 Stere=1 cubic meter or 1.31 cubic yards.
- 1 Decastere=10 steres or 13 cubic yards.

WEIGHTS.

- 1 Milligramme=.001 gramme or .01 grain.
- 1 Centigramme=.01 gramme or .15 grain.
- 1 Decigramme=.1 gramme or 1.54 grain.
- 1 Gramme=15.43 grains troy.
- 1 Decagramme=10 grammes or 5.64 drams avdp.
- 1 Hectogramme=100 grammes or 3.52 oz. avdp.
- 1 Kilogramme=1,000 grammes or 2.20 lbs. avdp.
- 1 Quintal=50 kilogrammes or 110.23 lbs. avdp.
- 1 Millier=500 kilogrammes or 1,102.31 lbs. avdp.
- 1 Tonne=1,000 kilogrammes or 2,204.62 lbs. avdp.

From the legal equivalents in use in this country are deduced the following tables for converting weights and measures into either the metric or common systems:

A FALLING BAROMETER.

A rapid fall indicates stormy weather.

A rapid fall with westerly wind indicates stormy weather from the northward.

A fall with a northerly wind indicates storm, with rain and hail in summer, and snow in winter.

A fall with increased moisture in the air, and heat increasing, indicates wind and rain from the southward.

A fall with dry air and cold increasing in winter indicates snow.

A fall after very calm and warm weather indicates rain with squally weather.

The barometer rises for northerly winds, including from northwest by north to the eastward for dry, or less wet weather, for less wind, or for more than one of these changes, except on a few occasions, when rain, hail, or snow comes from the northward with strong wind.

The barometer falls for southerly wind, including from southeast by south to the westward, for wet weather, for stronger wind or for more than one of these changes, except on a few occasions, when moderate wind, with rain or snow, comes from the northward.

On shipboard, for purposes of discipline and to divide the watch fairly, the crew is mustered in two divisions—the Starboard (right side, looking toward the head), and the Port (left). The day commences at noon, and is thus divided: Afternoon Watch, noon to 4 P. M.; First Dog Watch, 4 P. M. to 6 P. M.; Second Dog Watch, 6 P. M. to 8 P. M.; First Watch, 8 P. M. to midnight; Middle Watch, 12 A. M. to 4 A. M.; Morning Watch, 4 A. M. to 8 A. M.; Forenoon Watch, 8 A. M. to noon. This makes seven Watches, which enables the crew to keep them alternately, as the Watch which comes on duty at noon one day has the afternoon next day, and the men who have only four hours' rest one night have eight hours the next. This is the reason for having Dog Watches, which are made by dividing the hours between 4 P. M. and 8 P. M. into two Watches. Time is kept by means of "Bells," although sometimes there is but one Bell on the ship.

MISCELLANEOUS INFORMATION.

RULES FOR FORETELLING THE WEATHER.

ADAPTED FOR USE WITH ANEROID BAROMETERS.

A RISING BAROMETER.

A rapid rise indicates unsettled weather.

A gradual rise indicates settled weather.

A rise with dry air and cold increasing in summer indicates wind from the northward; and if rain has fallen, better weather may be expected.

A rise with moist air and a low temperature indicates wind and rain from the northward.

A rise with southerly winds indicates fine weather.

A STEADY BAROMETER.

With dry air and seasonable temperature indicates a continuance of very fine weather.

LEGAL BREVITIES.

A note dated on Sunday is void. A note obtained by fraud, or from one intoxicated, is void. If a note be lost or stolen, it does not release the maker, he must pay it. An indorser of a note is exempt from liability, if not served with a notice of its dishonor within 24 hours of its non-payment. A note by a minor is void. Notes bear interest only when so stated. Principals are responsible for their agents. Each individual in partnership is responsible for the whole amount of the debts of the firm. Ignorance of the law excuses no one. It is a fraud to conceal a fraud. It is illegal to compound a felony. The law compels no one to do impossibilities. An agreement without consideration is void. Signatures in lead pencil are good in law. A receipt for money is not legally conclusive. The acts of one partner bind all the others. Contracts made on Sunday cannot be enforced. A contract with a minor is void. A contract made with a lunatic is void. Written contracts concerning land must be under seal.

AUSTRALIAN BALLOT SYSTEM.

Instructions for Voters in Conformity with the Illinois State Laws.*

When entering the voting place, give your name, and, if required, your residence, to the Judges of Election.

If your name be found on the Register, you will be permitted to enter the inclosed space inside the guard rail. Then, if your vote be not challenged, one of the Judges will hand you a Ballot, on the back of which he must write his initials. If your name be not on the Register, or has been erased, you cannot vote.

If your vote be challenged you will not receive a Ballot until you have established your right to vote, either under oath to the Judges of Election, or by affidavit.

When you have received a ballot retire at once, alone, into one of the voting booths, and prepare your ballot for the ballot box by marking it as the law prescribes.

At the top of each column you will find the name of each party ticket or list of candidates, as Democratic, Republican, Prohibition, &c. The names of all the candidates of each party and each group of petitioners are to be found in that column directly beneath the name of the party, and nowhere else.

At the left of the party name, or heading of the different tickets, will be a circle, half-inch in diameter. At the left of each name on the ballot will be a square quarter-inch on each side. To prepare your ballot for voting, you must mark it with a cross, either in the circle at the top of the ticket, or in the square before the name of each candidate for whom you wish to vote; you can make this cross either with a pen or pencil.

Do not mark your ballot in any way, except as directed below, and do not erase any names.

The law of most states using the Australian ballot system permits four methods of marking the ballots for voting, as follows:

1. To vote for all candidates of a party, that is to vote a straight party ticket, mark a cross in the circle at the head of the ticket of your choice. A ballot so marked will be counted for all the candidates in the column under the circle so marked.

2. To split or scratch a ballot make a cross in the circle at the head of the ticket of your choice, and then make a cross in the square before the name or names of any candidates for whom you want to vote on any other ticket or tickets. A ballot so marked will be counted for all the candidates on the ticket under the circle marked, except for the offices for which the names of candidates are marked on the other ticket or tickets on the ballot, and the latter will be counted for the candidates marked in the square on those tickets. But voters are cautioned against marking a ballot by this method when there is more than one candidate to be elected to the same office on the same ballot, as in case of Presidential Electors, Congressmen-at-large, &c. The law says: "If the voter marks more names than there are persons to be elected to an office, his ballot shall not be counted for such office." Therefore, if you wish to split your ticket on Presidential Electors, Congressmen-at-large, &c., you should do so by placing a cross (X) opposite the names of all those you wish to vote for, but you must be careful not to make a cross (X) opposite the names of more than the number of men to be elected for each office. When there is but one candidate to be elected to the same office on the same ballot, the danger of confusion above pointed out does not arise. A safe way to "split" a ticket, however, is to mark the name of each candidate for whom you want to vote in the squares and leave the circle blank.

3. Another method of marking a ballot, that is, to vote for some of the candidates on one ticket and remaining candidates on another ticket, leave all the circles blank and mark a cross in the square to the left of each candidate of your choice. A ballot so marked will be counted only for the candidate marked. But be careful not to mark more names than there are persons to be elected to office, or your ballot will not be counted for such office.

4. If the voter desires to vote for a candidate not on the ticket of his choice, he may write in the name of the candidate of his choice in the blank space on the ticket, making a cross (X) before the name written in.

Where the word ballot is used in this instruction the entire sheet given to the voter by the Judge of Election is meant.

Where the word ticket is used, only a single party group of candidates is meant.

In voting on any proposition submitted to vote, and printed on the ballot, make a cross (X) mark in the column opposite the headings "Yes" or "No," and your ballot will be counted "for," if you mark opposite "Yes," and "against," if you mark opposite "No."

Before leaving the voting booth fold your ballot so as to conceal the marks, and to expose the official indorsement on the back.

Leave the booth and hand the ballot to the judge in charge of the ballot box, who, without numbering it, must deposit it in the box.

You will not be allowed to occupy a voting booth with another voter.

You will not be allowed to occupy a booth more than five minutes, if others are waiting to vote.

You will not be allowed to remain in the inclosed space more than ten minutes, and you must quit it as soon as you have voted.

You will not be allowed to reënter the inclosed space, after you have voted, during the election.

You will not be allowed to take a ballot from the polling place.

You will not be allowed to vote any ballot except the one you received from the judges.

If you spoil a ballot in preparing it, you must return it and ask for another in the place of it. Do not vote a torn or mutilated ballot.

*Similar laws, differing only in unimportant details, are in use in a majority of the States of the Union.

If a voter will declare upon oath that he cannot read the English language, or that by reason of physical disability he is unable to mark his ballot, upon request he will be assisted by two of the election officers, appointed for that purpose, of opposite political parties. These officers will mark the ballot as directed by the voter.

Intoxication will not be regarded as a physical disability, and if a voter is intoxicated, he will receive no assistance in marking his ballot.

The polls will be opened at 6 o'clock in the morning and closed at 4 o'clock in the evening. Between these hours voters are entitled to absent themselves from their place of employment for the period of two hours for the purpose of voting. They will not be liable to any penalty for their absence, nor shall any deduction be made from their wages or salary on that account; but they must ask for leave of absence before the day of election, and their employer may specify the hours during which they may be absent.

PASSPORT REGULATIONS.

Passports are issued only to citizens of the United States, upon application, supported by proof of citizenship. Citizenship is acquired by birth, by naturalization, and by annexation of territory. An alien woman who marries a citizen of the United States thereby becomes a citizen. Minor children resident in the United States become citizens by the naturalization of their father.

When the applicant is a native citizen of the United States he must transmit his own affidavit of this fact, stating his age and place of birth, with the certificate of one other citizen of the United States to whom he is personally known, stating that the declaration made by the applicant is true. The affidavit must be attested by a notary public, under his signature and seal of office. When there is no notary in the place the affidavit may be made before a justice of the peace or other officer authorized to administer oaths; but if he has no seal, his official act must be authenticated by certificate of a court of record.

A person born abroad who claims that his father was a native citizen of the United States must state in his affidavit that his father was born in the United States, has resided therein, and was a citizen of the same at the time of the applicant's birth. This affidavit must be supported by that of one other citizen acquainted with the facts.

NATURALIZED CITIZENS.

If the applicant be a naturalized citizen, his certificate of naturalization must be transmitted for inspection (it will be returned with the passport), and he must state in his affidavit that he is the identical person described in the certificate presented. Passports cannot be issued to aliens who have only declared their intention to become citizens.

Military service does not of itself confer citizenship. A person of alien birth, who has been honorably discharged from military service in the United States, but who has not been naturalized, should not transmit his discharge paper in application for a passport, but should apply to the proper court for admission to citizenship, and transmit the certificate of naturalization so obtained. The signature to the application and oath of allegiance should conform in orthography to the applicant's name as written in the naturalization paper, which the department follows.

Every applicant is required to state his occupation and the place of his permanent legal residence, and to declare that he goes abroad for temporary sojourn and intends to return to the United States with the purpose of residing and performing the duties of citizenship therein.

The wife or widow of a naturalized citizen must transmit the naturalization certificate of the husband, stating in her affidavit that she is the wife or widow of the person described therein. The children of a naturalized citizen, claiming citizenship through the father, must transmit the certificate of naturalization of the father, stating in their affidavits that they are children of the person described therein, and were minors at the time of such naturalization.

The oath of allegiance to the United States will be required in all cases.

APPLICATION.

The application should be accompanied by a description of the person, stating the following particulars, viz.: Age:—years. Stature:—feet, —inches (English measure). Forehead:—. Eyes:—. Nose:—. Mouth:—. Chin:—. Hair:—. Complexion:—. Face:—.

If the applicant is to be accompanied by his wife, minor children, or servants, it will be sufficient to state the names and ages of such persons and their relationship to the applicant, when a single passport for the whole will suffice. For any other person in the party, a separate passport will be required. A woman's passport may include her minor children and servants.

FEE REQUIRED.

By act of Congress, approved March 23, 1888, a fee of one dollar is required to be collected for every citizen's passport. That amount in currency or postal note should accompany each application. Orders should be payable to the Disbursing Clerk of the Department of State. Drafts or checks are inconvenient and undesirable.

A passport is good for two years from its date and no longer. A new one may be obtained by stating the date and number of the old one, paying the fee of one dollar, and furnishing satisfactory evidence that the applicant is at the time within the United States. The oath of allegiance must also be transmitted when the former passport was issued prior to 1861.

Citizens of the United States desiring to obtain passports while in a foreign country must apply to the chief diplomatic representative of the United States in that country, or, in the absence of a diplomatic representative, then to the consul-general, if there be one, or, in the absence of both the officers last named, to a consul. Passports cannot be lawfully issued by State authorities, or by judicial or municipal functionaries of the United States. (Revised Statutes, section 4075.)

To persons wishing to obtain passports for themselves blank forms of application will be furnished by this Department on request, stating whether the applicant be a native or a naturalized citizen, or claims citizenship through the naturalization of husband or parent. Forms are not furnished, except as samples, to those who make a business of procuring passports.

Communications should be addressed to the Department of State, indorsed "Passport Division," and each communication should give the post-office address of the person to whom the answer is to be directed. Professional titles will not be inserted in passports.

Persons applying for blank forms for passports should state whether the forms are required for native or naturalized citizens, as there are several forms, each different, to meet the case required, and it will often save time and trouble if this caution be observed.

A LIST OF THE
PRINCIPAL SIGNS AND ABBREVIATIONS IN COMMON USE

By Authors Writing on such Subjects as Require a Peculiar Technical Terminology,
and Typographical Semiology.

I. ASTRONOMICAL.

1. GREATER PLANETS, &c.

☉	The Sun; Sun's Longitude.	⊕, ⊖ or ♂	The Earth.
☾	New Moon.	♂	Mars.
☾	First Quarter; Moon's Longitude.	♃	Jupiter.
☾, or ☽	Full Moon.	♄	Saturn.
☾	Last Quarter.	♅, or ♁	Uranus.
☿	Mercury.	♆, or ♃	Neptune.
♀	Venus.	☄	Comet.
★, or ☆	Fixed Star.		

The sign ☉ is derived from a buckler with its umbo; ♀ is the caduceus of Mercury, or his head and winged cap; ♀, a looking-glass, appropriately refers to the vanity of Venus; ☉, the earth and its equator; ☊ indicates the four quarters of the globe; the sign ♄ indicates the globe and cross of sovereigns, a symbol of dominion; ♀, the symbol of Mars, is derived from the head, helmet, and nodding plume of a warrior, or a shield and spear; ♄, a representation of an eagle, with expanded wings, or the initial letter of the Greek name of Jupiter, with a line through it as a mark of abbreviation; ♄, a sickle, the emblem of the god of time; ♄, the initial letter of *Herschel*, the discoverer of Uraus (by whose name the planet was formerly known), with a planet suspended from the crossbar; ☉, the sign derived from that for the sun [☉], together with a part of that for Mars [♂]; ♄, a trident, the emblem of Neptune, the god of the sea.

2. MINOR PLANETS.

These planets were formerly designated by the four signs here given ♀, or ♀ Ceres; ♀, or ♂ Pallas; ♀ or ♂ Juno; ♀, or ♂ Vesta, but latterly they are all commonly designated by numbers indicating the order of their discovery, and their symbol is a small circle or oval inclosing this number; as, ①, Ceres; ②, Pallas; ③, Juno; ④, Vesta; and the like. Sometimes letters of the Greek alphabet are used in connection with the name of the constellation in which the star or planet is situated.

3. ZODIACAL SIGNS.

1. ♈ Aries, <i>the Ram.</i>	7. ♎ Libra, <i>the Balance.</i>
2. ♉ Taurus, <i>the Bull.</i>	8. ♏ Scorpio, <i>the Scorpion.</i>
3. ♊ Gemini, <i>the Twins.</i>	9. ♐ Sagittarius, <i>the Archer.</i>
4. ♋ Cancer, <i>the Crab.</i>	10. ♑ Capricornus, <i>the Goat.</i>
5. ♌ Leo, <i>the Lion.</i>	11. ♒ Aquarius, <i>the Waterman.</i>
6. ♍ Virgo, <i>the Virgin.</i>	12. ♓ Pisces, <i>the Fishes.</i>

These twelve signs are divided into four groups of three each—representing the spring, summer, autumn, and winter seasons.

The sign Γ is derived from the horns of a ram; δ , the head and horns of a bull; Π , the statues of Castor and Pollux; ζ , the claws of a crab; Θ , a corruption of the Greek letter Lambda, the initial of Λεόν, a lion, or else a representation of a lion's tail; Υ , a corruption of *par*, the first syllable of the Greek word for *virgin*; ω , a balance; μ , the legs and tail of a scorpion; ι , an arrow, and a small portion of the bow, which is to be seen at the bottom of the character; ν , a character combining the letters of the Greek word *tragos*=a goat; π , waves of water; \times , two fishes tied together.

4. ASPECTS AND NODES.

- ∂ Conjunction;—the bodies having the same longitude, or right ascension.
 * Sextile;—a difference of 60° or $\frac{1}{2}$ of the circle in longitude, or right ascension.
 ☾, or ☽ Quintile;—a difference of 72° or $\frac{1}{3}$ of the circle in longitude, or right ascension.
 □ Quadrature;—a difference of 90° or $\frac{1}{4}$ of the circle in longitude, or right ascension.
 Δ Trine;—a difference of 120° or $\frac{1}{3}$ of the circle in longitude, or right ascension.
 ♂ Opposition;—a difference of 180° or $\frac{1}{2}$ of the circle in longitude, or right ascension.
 ♀ Ascending Node.
 ♂ Descending Node.

5. SIGNS AND ABBREVIATIONS USED IN ASTRONOMICAL CALCULATIONS AND FORMULÆ.

α . Mean distance.
 $A.R.$ Right ascension.
 β Celestial latitude.
 D . Diameter.
 δ Declination.
 Δ Distance.
 E . East.
 e Eccentricity.
 $h.$, or h Hours; as $5h.$, or $5h$.
 i Inclination to the ecliptic.
 L, l , or ϵ Mean longitude in orbit.
 λ Longitude.
 M . Mass.
 $m.$, or m Minutes of time; as $5m.$, $5m$.
 μ , or n Mean daily motion.
 $+$ or N . North.
 $N. P. D.$ North polar distance.
 v, φ , or L . Longitude of ascending node.
 π or ω Longitude of perihelion.
 ρ . Perihelion distance.
 q , or R . Radius, or radius vector.
 $-$, or S . South.
 s , or s . Seconds of time; as, $16s.$, or $16s$.
 T . Periodic time.
 W . West.
 ϕ Angle of eccentricity; also, geographical latitude.
 $^{\circ}$ Degrees.
 $'$ Minutes of arc.
 $"$ Seconds of arc.

II. BOTANICAL.

These signs are used to designate the peculiarities of different species and varieties of plants, and are usually written without any accompanying verbal description. The signs are borrowed mainly from astronomy and chemistry, and are often confounded by the inexperienced reader with one or the other of these two sciences.

③, ④, ⑤, or ① Annual.
 ③, ④⑤, ③, or ② Biennial.
 ② Perennial.
 Δ Evergreen.
 ○ Monocarpous plant; flowers but once.
 † An undershrub.
 A shrub.
 A large shrub.
 A tree.
 ③ A monocarpous perennial.
 ♂, or ♂ A staminate or male flower.
 ♀ Pistillate, fertile, or female.
 ♂ Perfect or hermaphrodite.
 ♂♀ Unisexual; male and female flowers separate.
 ♂—♀ Monoecious; male and female flowers on the same plant.
 ♂:♀ Dioecious; male and female flowers on separate plants.
 ♀♂ Polygamous; having hermaphrodite and unisexual flowers on the same or different plants.
 (—) A climbing plant.
 (—) Turning to the left.
 (—) Turning to the right.

○ = Cotyledons accumbent, and radicle lateral.
 ○|| Cotyledons incumbent, and radicle dorsal.
 ○≫ Cotyledons conduplicate, and radicle dorsal.
 ○||| Cotyledons folded twice, and radicle dorsal.
 ○||| Cotyledons folded three times, and radicle dorsal.
 ∞, or 00 Indefinite number; applied to stamens, more than twenty.
 0 Wanting; showing the absence of a part.
 • Feet.
 • Inches. " Lines. [With some writers the signs for feet, inches, and lines are ", ", ".]
 † indicates certainty. Appended to the name of an author, it indicates that he has examined an authentic specimen; appended to the name of a locality, that the writer has seen or collected specimens from that locality.
 † or ? Doubt or uncertainty.

III. CHEMICAL.

- One equivalent of oxygen:—when written above an elemental symbol the number of repetitions indicates the number of equivalents of oxygen entering into a composition; as, $\ddot{\text{S}}=\text{SO}_3$.
- One atom or equivalent of sulphur; thus, Fe^{S} =bisulphide of iron.
A dash drawn across a symbol having either of the foregoing signs above it multiplies the atoms of the symbol by 2; thus, $\ddot{\text{Fe}}^{\text{S}}=\text{Fe}_2\text{O}_3$ =sesquioxide of iron.
- + is used between the symbols of substances brought together for a reaction or produced by reaction. In organic chemistry it=a base or alkaloid if written above the initial letter of the name of the substance; as, M^+ , morphine; Q^+ , quinine.

— signifies a single unit of affinity; in organic chemistry, an acid, when written above the initial letter of the name of the acid; as, \bar{S} =sulphuric acid; sometimes used as a sign of subtraction.

The following table gives the elemental symbols and atomic weights:

NAME.	Sym- bol.	At. Mass.	NAME.	Sym- bol.	At. Mass.
Hydrogen	H	1	Chromium	Cr	52.45
Fluorine	F	19.06	Molybdenum	Mo	95.9
Chlorine	Cl	35.37	Tungsten (Wolfram)	W	183.60
Bromine	Br	79.76	Mercury (Hydrargyrum)	Hg	199.80
Iodine	I	126.54	Beryllium	Be	9.08

In the Roman notation, a character at the right hand of a larger numeral is added to that of such numeral; as, VI=V+I=6. I, X, and sometimes C, are also placed at the left hand of larger numerals, and when so situated their value is subtracted from that of such numerals; as, IV, that is, V—I=4. After the sign IQ for D, when the character Q was repeated, each repetition had the effect to multiply D by ten; as, IQQ, 5,000; IQQQ, 50,000; and the like. In writing numbers twice as great as these, C was placed as many times before the stroke I, as the Q was written after it.

2. CALCULATION.

- + Plus, the sign of addition; used also to indicate that figures are only approximately exact.
- Minus, the sign of subtraction; used also to indicate that figures have been left off from the end of a number, and that the last figure has been increased by one.
- ±, or ∓ Plus or minus; indicating that either of the signs + or — may properly be used.

× Multiplied by; $5 \times 4 = 20$.

Multiplication is sometimes indicated by placing a dot between the factors; $2 \cdot 3 \cdot 5 = 30$.

+ The sign of division; division is also indicated by the sign $:$; as $x \div y$, $x:y$. It is also indicated when two numbers have a straight line drawn between them, as $\frac{x}{y}$; or an oblique line, as $\frac{x}{y}$. Yet another sign is the character \div ; thus $8 \div 4 = 2$.

= Is equal to; equals.

> Is more than; as, $x > y$; that is, x is greater than y .

< Is less than; as, $x < y$; that is, x is less than y .

The above signs reversed have a contrary meaning and express the fact that numbers may be equal or greater or less than the number at the apex of the angle.

≡ Is equivalent to; applied to magnitudes or quantities which are equal in area or volume, but are not of the same form.

≠ Of the form of: as $19 \neq (2 \times 9 + 1)$; that is, the odd number 19 is of the form $2 \times 9 + 1$.

∣ Is divisible by; as, $x \neq y$; that is y is an exact factor of x .

~ The difference between; used to designate the difference between two quantities without indicating which is the greater.

— The same as ~.

α Varies as; as, $x \propto y$; that is, x varies as y .

+ Geometrical proportion; as, $+ x:y :: a:b$, that is, the geometrical proportion of those quantities.

∴ Is to; the ratio of.

∴ As; equals.

∴ Minus; also used to express the arithmetical ratio of numbers.

∴ Equals.

∞ Indefinitely great; greater than any finite or assignable quantity.

0 Indefinitely small; less than any assignable quantity.

! or L The continued product of numbers from one upward; as $5! = 5 \times 4 \times 3 \times 2 \times 1$.

∴ Therefore.

∴ Since or because.

∴ And so on.

≡ Is the same as; as $2 \times 4 \equiv 6 + 2$.

∠ Angle; frequently written $>$ or Δ .

The angle between two lines is also indicated by placing one of the letters denoting the inclosing lines over the other.

⊥ Right angle.

The perpendicular; as $EF \perp MN = EF$ drawn perpendicularly to MN .

∥ Parallel; parallel to.

∠ Is equiangular to.

∠ Is equilateral to.

○ Circle; circumference; 360° .

⌒ Arc of a circle.

△ Triangle.

□ Square.

⊠ Rectangle.

√, or √ Root, indicating, when used without a figure placed above it, the square root. When any other than the square root is meant a figure (called the *index*) expressing the degree of the required root, is placed above the sign; as, $\sqrt[n]{a}$, $\sqrt[n]{a}$.

This sign is a modification of the letter r , which was used as an abbreviation of the Latin word *radix*. Sometimes a root is denoted by index in fractional form at the right-hand side of the quantity and above it, the denominator of the index expressing the degree of the root; as, $x^{\frac{1}{2}}$, $x^{\frac{1}{3}}$.

— Vinculum, or () Parentheses, [] These signs denote that the quantities to which they are applied are to be taken together.

{ Brackets, or { } Braces, } ties to which they are applied are to be taken together.

f, or F Function; other letters or signs are frequently used to indicate functions. Some are used without the parentheses.

d Differential.

δ Variation.

Δ Finite difference.

D Differential coefficient.

• Fluxion; differential; written above the quantity, as, \dot{x} .

∫ [An old-fashioned long s (the initial of the word *summa*).] Integral. It is repeated to indicate that the operation of integration is to be performed twice, or three or more times, as, $\int \int$, $\int \int \int$, etc. For a number of times greater than three, an index is written at the right hand above; as, $\int^m xyz$; that is, the m th integral, or the result of m integrations of xyz .

∫_x Indicates that the integral is to be taken between the value y of the variable and its value x . \int^x denotes that the integral ends at the value x of the variable, and \int^y that it begins at the value y .

Σ Sum; algebraic sum; when used to indicate the summation of finite differences, it has a sense similar to that of the symbol f .

Π The continued product of all terms such as [those indicated].

π [The Greek letter pi.] The number $3.14159265+$; the ratio of the circumference of a circle to its diameter, of a semicircle to its radius, and of the area of a circle to the square of its radius.

e, or e The number $2.7182818+$; the base of the Napierian system of logarithms; also the eccentricity of a conic section.

M The modulus of a system of logarithms; especially of the common system of logarithms. In this system it is equal to $0.4342944819+$.

g The force of gravity.

s Seconds.

R° Radius of a circle in degrees of arc.

R′ Radius in minutes of arc.

R″ Radius in seconds of arc.

′, ″, etc. Used to mark quantities of the same kind which are to be distinguished.

When the number of accents would be greater than three, the corresponding Roman numerals are used instead of them.

1, 2, 3, &c. Exponents placed above and at the right hand of quantities to indicate that they are raised to powers whose degree is indicated by the figure.

sin.=sine of; cos., tan., cot., sec., cosec, versin., and covers., denote respectively cosine, tangent, cotangent, secant, cosecant, versed sine, and covered sine of an arc.

sinh. The hyperbolic sine.

cosh. The hyperbolic cosine.

VI. MISCELLANEOUS.

&, &, &. And.

&c. (Et cetera); and so forth.

Church-℞ Response.

Service-℞ Versicle.

Book-℞ Used to divide each verse of a psalm into two parts, and show where the response begins.

Mark-℞ or + A sign of the cross used by the pope, and by Roman Catholic bishops and archbishops, immediately before the subscription of their names. In service books, used in those places in the prayers and benediction where the sign of the cross is to be made.

➔ Broad Arrow; a British government mark.

✕ or + A character made by persons unable to write, his when they are required to sign their names. The name John ✕ Doe of the party is added by some one who can write; as, mark.

♂ Male;—used in zoology.

♀ Female;—used in zoology.

< Derived from;—used in giving etymologies.

> Whence is derived;—used in giving etymologies.

+ And;—used in giving etymologies.

* Assumed or supposed, but not found or verified; used in giving etymologies.

† Died;—used in genealogies, &c.

A1 The rating of a first-class vessel; the letter denoting that the hull is seaworthy, and the figure the efficient state of her equipment &c. The figure 2 would imply that the equipment is of an inferior quality. When a vessel is too old for the character A (four to fifteen years), it is registered A in red.

AE The rating of a vessel of the third class, fit to convey perishable goods on short voyages only.

E The rating of a vessel fit for carrying on a voyage of any length such goods only as are not liable to sea damage.

I The rating of a vessel fit for carrying goods of the same sort on shorter voyages only.

MC Indicate that the boiler and machinery of a steam vessel are in good order and safe working condition.

XX Ale or other liquor of double strength.

XXX Ale or other liquor of triple strength.

VIII. MUSICAL.

Staff; the five lines with the four spaces between them.

When these are not sufficient, other lines called ledger lines, are added above or below.

Bar;—the line drawn perpendicularly across the staff to separate the notes into measures.

Double Bar;—marking the greater divisions of a piece.

Close;—the end of a composition;—often written

Notes; called, respectively, semibreve, minim, crochet, quaver, semiquaver, and demi-semiquaver (or whole, half, quarter, eighth, sixteenth, etc.); each successive figure indicates a tone of one-half the length of that of the figure immediately preceding it.

A dot after a note adds to it one-half of the length of the same note with-

out the dot;  is equal to  The stems of the notes may be turned either up or down; their position in this respect not affecting their value.

The breve is sometimes used; it is twice the length of the semibreve. Two other characters, the long, two breves in length, and the large, equal to four breves, are now obsolete. When a group of tailed notes come together, they are generally

connected by the tails or strokes.

When a stroke or strokes are placed over a note, or written across the stem of it, it indicates that it is to be divided into quavers, semiquavers, demi-semiquavers, etc., according to the number of the strokes.

These oblique strokes, when written after a group of notes, indicate that that group is to be repeated—the marks corresponding with the number of groups to be repeated.

The tie, wave, or slur, with its accompanying figure, 3, 5, 7, is a mark written over groups of notes to indicate that the group, of which the notes are all equal, is to be performed in the time of a number of notes (of the same denomination) one less than the figure used under the tie, thus

Rests are characters indicating a pause in the performance, the length of the pause being indicated by the form of the character. The rests here shown exhibit in their order the marks used for notes, ranging from whole notes to demi-semiquavers.

A rest of a whole measure is expressed by a whole note rest placed upon the fourth line, the figure 1 being written above; if more than one measure is to be included in the pause the figure written above is changed

to the corresponding number: 1 4 25 sometimes a vertical or oblique stroke drawn through the third line is used for the same purpose.

G clef;—written on the second line, indicating that every note upon that line is to be sounded as G of the natural scale.

F clef;—written on the fourth line, indicating that every note upon that line is to be sounded as F of the natural scale.

C clef;—indicating that every note upon the line or space on which it is placed is to be sounded as C of the natural scale.

Flat;—used to indicate that the note before which it is placed is to be sounded lower by a half tone than the natural note. When placed on a line or space at the beginning of a piece, it signifies that every note on such line or space is similarly affected, or reduced a half tone.

Double flat;—used to further flatten a note already flattened.

Combination of flat and natural;—used after a double flat to indicate that the double flat has ceased its functions.

Sharp;—used to indicate that the note before which it is placed is to be sounded higher by a half tone than the natural note.

Double sharp;—used to further raise a note, already sharpened.

Combination of natural and single sharp, used after a double sharp to indicate that the double sharp has lost its force.

Natural;—used to counteract the effect of a previous ♯ or ♭.

Repeat;—placed at the end of a passage to denote that it is to be played or sung. Sometimes the dots are placed also at the beginning of the passage.

Characters marking common time, the first indicating two half notes, the latter four quarter notes in a bar. The latter sometimes marks alla breve, or faster time.

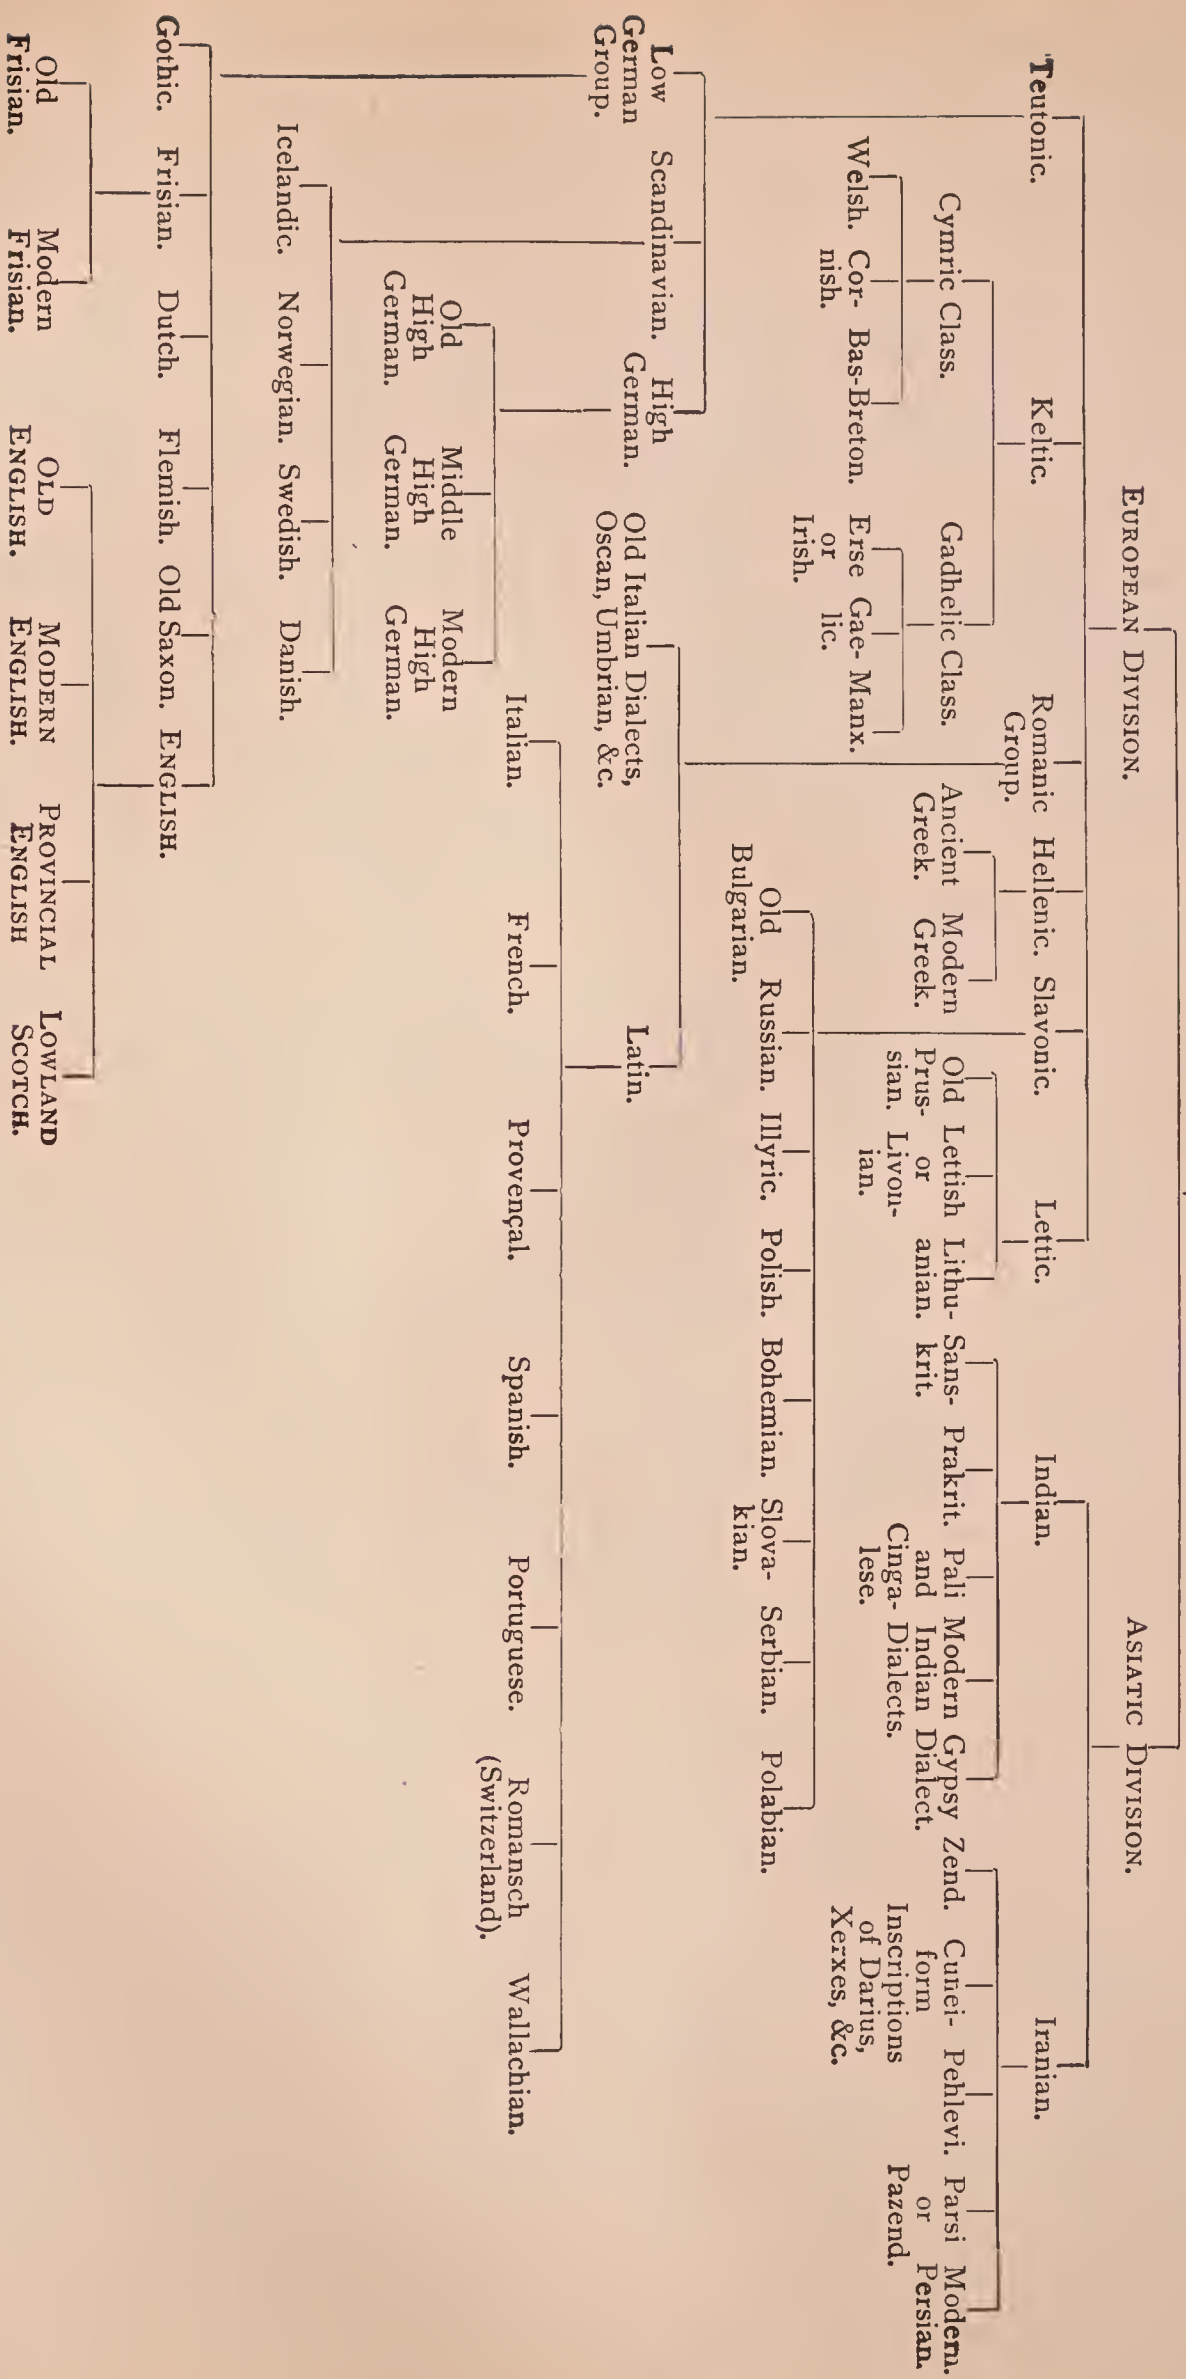

Used to mark the point to which reference is made, or from which the repetition of a passage is to begin.

For appoggiatura and acciaccatura, see Dictionary.

Turn;—indicates that the note over which it is placed is to be repeated and played as a triplet. It is sometimes written in combination with a flat or sharp or natural sign. When it is inverted or made to stand vertically it indicates that the repeated notes are to be played in inverse order.
